## DETAILED ACTION

### *Claim Objections*

**Claims 1, 2 and 19** are objected to the process of dipping the (apparatus) claims in KOH and H<sub>2</sub>O<sub>2</sub> respectively is not germane to patentability.

**Claims 7 and 18** are objected because the language is unclear as to whether the claims are independent claim or a dependent claims. The claims recite a method yet they depend from apparatus claims.

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. **Claims 1-18** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

**Claims 1 and 2** recite the limitation "wherein the light-transmitting region satisfies that difference  $\Delta T$  ( $\Delta T = T_o - T_i$ ) (%) between  $T_o$  and  $T_i$ " is awkwardly and confusingly written.

Claims 5 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to further limit the independent claim.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**4. Claims 1-4, 6-12 and 14-24, as best understood, are rejected under 35 U.S.C.**

**103(a) as being unpatentable over Komukai et al. U. S. 2003/0171081.**

Komukai et al. discloses a polishing pad comprising the claimed features except for the polyurethane resin having a ratio of the number of isocyanate groups of the organic isocyanate to the number of functional groups of the polyol and the chain extender in total is 0.95 to 1.15. The ratio of the number of isocyanate groups of the organic isocyanate to the number of functional groups of the polyol and the chain extender may be obtained through experimentation. It would have been obvious to one having ordinary skill in the art at the time the invention was made to \*, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).
